

특이한 발명

- 인간의 욕망은 끝이 없다 -

1. 엉덩이 브라, Wonder Butt Bra, US Patent Issued In 2002

Here's a cheeky idea, The Wonder Butt Bra! As the inventor explains; "In today's society both women and men have become increasingly more concerned with their appearance. A variety of approaches are being taken to improve one's physical appearance, including cosmetic surgery, exercise, dieting, as well as enhancements to the body shape acquired through the wearing of a variety of undergarments. The problem with these previous below-the-waist undergarments, is that none lifts, supports and shapes a person's buttocks similar to the underwire bra that is a fairly common undergarment for women today. While there have been a variety of devices that add padding or some other shape to the buttock, none actually lift it, while also giving it a desirable shape." Well said, my man.

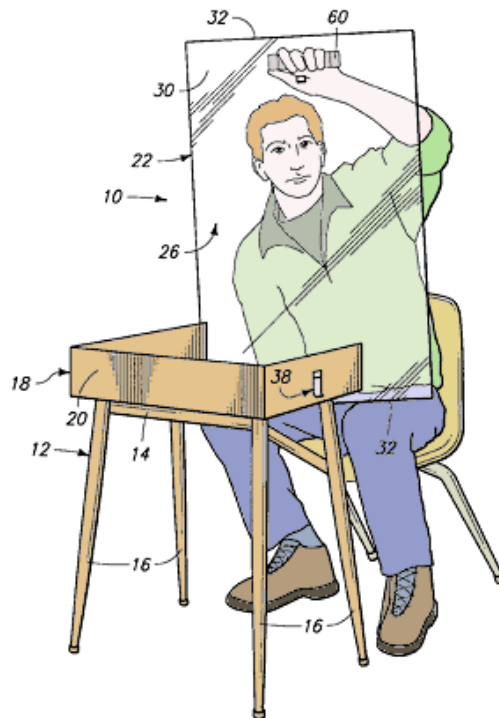

Conveniently, the WBB is fully adjustable to fit all sizes of butts. Big butts, small butts, and all butts in between. Heck, we just like saying the word butts. It just sounds funny. Butts, butts, butts. But we digress... so next time gravity takes its toll on your backside, step into the world of the firm, step into the Wonder Butt Bra. Victoria's Secret, are you listening?

남자에게도 기회는 왔다. 우리는 여자들의 특권(?)이라고 생각하는 브래지어를 남자들도 사용할 수 있는 발명품이 있다. 물론 여자들도 사용할 수 있다. 가슴을 이쁘게 보일려고 하는 브래지어를 엉덩이에도 적용한 것이다. 형상기억합금도 사용가능하고 속칭(?) 뿔도 가능하지 않을까? 하여튼 외모에 대한 인간의 욕망은 끝이 없다.

2. 방탄 책상, Bulletproof Desk, US Patent Issued In 2001

Let's say you are a student at school and an idiot with a gun enters the room. Unfortunately, this happens randomly and is very hard to prevent. So our inventor devised a personal protection device, the Bulletproof Desk. The desk features a clear, bulletproof top that can easily be removed and then using it's handles, it can be held up as a protective shield. The absurd part of this invention isn't in it's design, it's that the inventor had to think of a way to protect our students from idiots with guns.

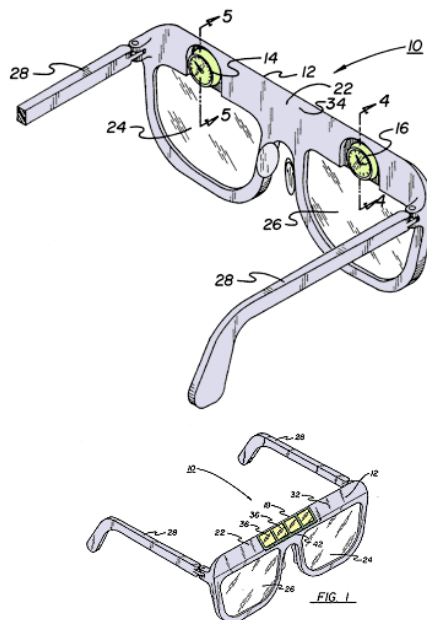

우리나라에서는 별 필요없는 발명품인것 같으나, 투명한 소재를 사용한 점이 특이하다. 왜 학생들이 방판책상이 필요할까? 아무튼 간단하면서도 재미있는 발명품인 것 같다.

3. 시계온도안경, Time Temp Glasses, US Patent Issued In 1995

Do you have an overwhelming desire to always know the time and temperature? Or, how about the need to know the barometric pressure or perhaps how many hours and minutes must pass before your favorite TV show begins? Now, with the Time and Temp Glasses, your need to know can be faithfully fulfilled simply by glancing up at your cool little built-in informational gauges.

Your tiny eye indicators are powered by a Lilliputian solar panel mounted on the front of your glasses. So make sure to walk towards the sun at least part of each day.

Our only concern here is being able to read the gauges if you are far-sighted. Or is that near-sighted? You may need to wear contacts under your glasses just so you can view the info you need to know.

안경의 진화는 과연 어디까지 인가? 시간과 온도를 알 수 있는 만능안경이 개발되었다. 물론 태양전지를 이용한 안경이고, 하여튼 재미있다.

END.
