Nanotube composites II

nanotubes in polyepoxide

2014-01-21

- Attaching chemical groups benzyne – soldier's armour
- Epoxy glue 3 times harder
- Carbide strength alternative layers polymer, nanotubes
- Thin layer of composite on other materials, nanocomposite paint, grease

Also composites with ceramics

ENCH358 nanotubes lecture 2 2003

Transistor components

 < 5 nm width compared with existing best width of xx µm for Si circuits

2014-01-21

ENCH358 nanotubes lecture 2 2003

Transistor nanotube

4

multiwall nanotubes

Making nanotubes

Electric arc - batch reactor
scaleup - continuous reactor

batch reactor operation

cathode deposit ENCH358 nanotubes lecture 2 2003

ENCH358 nanotubes lecture 2 2003

Laser production

- Yields >70% SWNT if double pulsed
- Ropes 10-20 nm dia, 100 µm length
- How to scale up?

Also can use suspended catalyst nanoparticles to form suspended NT

Chemical vapour deposition (CVD)

Acetylene over iron nanoparticles 700°C forms MWNT covered with amorphous C on outer layer Ethylene, hydrogen + methane over Co, Ni, Fe nanoparticles at 1000°C forms 70-80% SWNT uncapped

 2CO -> C + CO₂ also forms NT

Low stiffness, strength of NT compared with those from high T arc production 2014-01-21 ENCH358 nanotubes lecture 2 2003 8
