Most of the electrical appliances using the anti-fingerprint resin coated Electro-galvanized steel sheets. Currently, Home appliance's market demand fashionable appearance and special functional properties. Previous AFP resin coated electro-galvanized steel apply most using the inner panel. To extend it's application market, colorful design and special functional properties need to be advanced. To satisfy those issues we have experimented thin film coated electro-galvanized steel sheet with a various functional materials addition to the resin components in the coated layer.
